

MAKE THE SecureCRT App STAYS SOLO

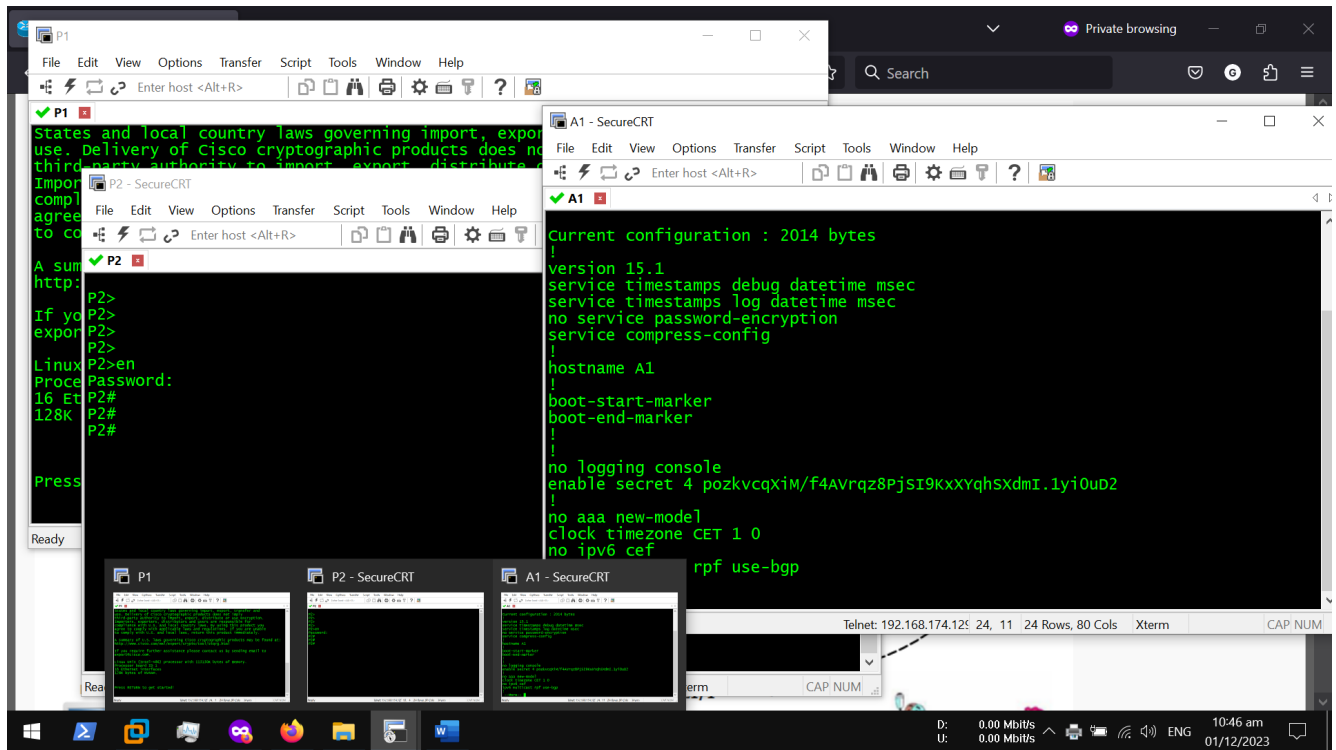

This setup is recommended if the SecureCRT App provided by #TeamRivan is installed at the default installation path and using with FireFox Web Browser.

By default, when we launch the RSTHayup VM for practicing/training, we always open them each IP and port in the Quick Connect (kidlat icon), one by one, and this could be annoying to some people everytime we do the *paunang setup*.

If we click on the devices inside the RST Topology (P1, P2, D1, R4, I4, etc...) SecureCRT (or whatever default Telnet Client app) will launch in a multiple windows which could be also inconvenient to handle.

Good thing that a workaround has been figured out 😊
